

⇒ Phases of Biogeochemical Cycles :-

Brand name

Strength

Company

Quantity

There are two main Phases of all the biogeochemical cycle :-

- (A) Biotic phase or organic
- (B) Abiotic phase.

- These chemical elements move through the food chain of ecosystem and constitute the organic phase.

- The second phase of cycle is abiotic is divided into two phases :- (a) Sedimentary phase
(b) Atmospheric phase.

- The abiotic phases. ex- Soil, Water and air

- The Biotic Phase:- ex- All the organisms of the biosphere.
